3RD EYE®

3rd Eye Digitally Connected Technology

Innovative solutions for the management of compactors and recycling equipment.

The Challenges

The existing method of managing compactors across various sites can be highly inefficient, placing you at a considerable disadvantage. Currently, the absence of a unified, easily accessible system for monitoring your entire compaction equipment portfolio requires either physical visits to each unit or reliance on updates from team members or personnel. This manual method introduces a significant variability in the operational process, as each individual's perception of when a compactor is full can differ dramatically. Such discrepancies can lead to inconsistencies in waste management practices, potentially causing inefficiencies, increased costs, and unnecessary delays in the collection process. Without a standardized, reliable way to gauge fullness, managing a fleet of compactors becomes a challenging task, reliant on subjective assessments rather than accurate, data-driven insights.

The Solution

Introducing 3rd Eye Connected Compactor, a key component of our innovative Connected Collections solution ecosystem. This system transforms your compaction process by delivering comprehensive, real-time insights for proactive compactor management and optimization.

With Connected Compactor, you gain real-time monitoring of waste or recycling levels, enabling a proactive approach to waste collection based on actual fullness. This optimizes hauling frequency, reduces operational costs, and enhances sustainability. Additionally, real-time notifications and maintenance alerts keep you informed, minimizing downtime and ensuring your compactors remain operational and highly efficient.

Revolutionize your waste and recycling management operations with 3rd Eye's Connected Compactor, turning your compaction process into a strategic asset for your operations.

Value Overview

- ✔ Sustainability
- ✔ Optimized service scheduling
- ✔ Communicated asset utilization
- ✔ Precise asset tracking
- ✔ Improved maintenance planning
- ✔ Increased recyclable recovery
