IMPROVE DRIVER
SAFETY

Keep drivers connected by delivering real-time updates without distraction.

3rd Eye's Tablet to Gateway solution links in-cab tablets with your back-office systems, delivering real-time route updates, diagnostics, and navigation directly to your drivers, without requiring manual input. This seamless connection improves accuracy, reduces delays, and gives your fleet the tools to operate more safely, efficiently, and effectively. From service verification to dynamic routing, your team stays in sync every step of the way.

3RD EYE®

3rd Eye Digitally Connected Technology

Stay connected and boost efficiency by linking drivers, trucks, and back office in real time.

The Challenges

Equipping drivers with the right information to complete their routes efficiently has remained a challenge for commercial fleets. Although paper route sheets are largely outdated, they still appear in trucks across North America. In-cab technology has become more common, but many systems still rely on frequent manual input, which can distract drivers, slow down operations, and increase the chance of missed or incorrect data.

Asking drivers to document service exceptions, remember gate codes, and complete other secondary tasks places an unnecessary burden on them and can compromise safety. Relying on manual driver feedback also increases the risk of inaccurate reporting. Without the right tools in place, fleets face communication gaps, reduced efficiency, and lost opportunities to improve performance in real time.

The Solution

3rd Eye's Tablet to Gateway solution gives drivers access to critical data without creating distraction. By connecting the in-cab tablet to the 3rd Eye Gateway, drivers remain continuously linked to both the truck and the back office. Planned routes can be shared, updated, and tracked in real time, allowing dispatchers to respond quickly to changing conditions without relying on driver input. The result is a smoother, safer, and more connected workflow from start to finish.

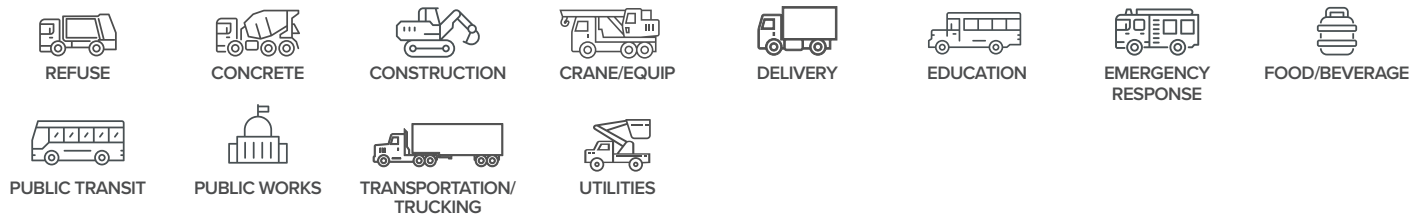

Beyond route updates, drivers can view real-time vehicle health diagnostics, system performance alerts, and navigational guidance tailored to their route. This keeps them focused on the road while ensuring they have the information needed to avoid delays, reduce errors, and stay compliant. The customizable tablet interface also enables automatic and on-demand media capture, adding valuable visibility for documentation and service verification.

With Tablet to Gateway, your fleet operates as one connected system, where drivers and back-office teams work together seamlessly. The technology simplifies daily tasks, improves data accuracy, and empowers your team to make faster, more informed decisions on the move.

Value Overview

- ✓ Real-time driver communication
- ✓ Passive route statusing
- ✓ System integration options
- ✓ Easy exception capture with corresponding media
- ✓ Location awareness and navigation assistance
- ✓ Enhanced driver safety

Designed For

Let drivers drive. We'll handle the rest.
